digostics DIGITAL DIAGNOSTICS	CARBON REDUCTION PLAN	PPN 006
	Reporting period: 1 January to 31 December 2025	Co. no. 11797881

1. Supplier details

Supplier name	Digostics Limited
Company number	11797881
Reporting period	1 January to 31 December 2025
Publication date	26/11/2026

2. Commitment to achieving net zero

Digostics Limited is committed to achieving net zero emissions by **2045**. This means reducing total emissions by 90% from our 2022 baseline and neutralising the remainder.

Our previous plan committed to net zero by 2040. We have moved to 2045 to align with the NHS net zero target for its supply chain, because emissions from manufacturing will come into the scope of our reporting from 2027. We will review and reset our targets in 2027, once those emissions are measured. 2045 remains well within the 2050 limit set by PPN 006.

3. Baseline emissions footprint

The baseline year is 2022 (1 January to 31 December). Baseline emissions are **40.3 tCO2e**. The baseline has been restated from 36.8 tCO2e to include inbound air freight of finished devices, which the original 2022 calculation left out.

Emissions	2022 baseline (kgCO2e)
Scope 1	3,034
Scope 2 (location-based)	1,934
Scope 3: upstream and downstream transport and distribution	4,522
Scope 3: waste generated in operations	22
Scope 3: business travel	16,356
Scope 3: employee commuting and home working	9,767
Scope 3: water and electricity transmission and distribution	4,694
Total	**40,327**

Totals may not add exactly because of rounding.

4. Current emissions reporting

Total emissions for the reporting year 2025 are **49.9 tCO2e**.

Emissions	2025 (kgCO2e)
Scope 1	1,897
Scope 2 (location-based)	1,453
Scope 3: upstream and downstream transport and distribution	11,018
Scope 3: waste generated in operations	155
Scope 3: business travel	28,421
Scope 3: employee commuting and home working	6,843
Scope 3: water and electricity transmission and distribution	152
Total	**49,939**

Office energy is estimated from floor area using CIBSE TM46 benchmarks, because the building is not metered by tenant. Emissions are calculated with the UK Government (DESNZ) 2025 conversion factors.

Emissions from the manufacture of purchased goods are outside the PPN 006 minimum and are not yet reported. We will measure them from 2026 and include them in future updates of this plan.

5. Emissions reduction targets

We will reduce total emissions by 90% from the 2022 baseline, to no more than 4.0 tCO2e by 2045. Interim milestones follow a straight-line path and are reviewed against actual emissions each year.

Year	Target (tCO2e)
2030	27.7
2035	19.8
2040	11.9
2045	4.0

Emissions in 2025 were above the straight-line path, mainly because of business growth, air freight of devices and long-haul business travel. The projects below address these sources.

6. Carbon reduction projects

6.1. Completed carbon reduction initiatives

- An online-first policy for external meetings.

6.2. Planned carbon reduction projects

- **Freight:** devices shipped by sea by default where product integrity (particularly temperature exposure) permits, with air freight only by approved exception. Target: 50% of devices received by sea by 2028.
- **Business travel:** virtual meetings first; rail for UK and near-European trips under 5 hours where rail is practicable; economy class by default, premium economy only for flights over 4 hours, and business class only for long haul flights, with executive approval.
- **Premises:** renewable electricity at our office, and annual monitoring of our own electricity use.

- **Commuting and home working:** an annual staff travel survey, with hybrid working retained.

The 2022 plan's targets to reduce business mileage and freight emissions per device were not met. They are replaced by the freight and business travel projects above.

Progress against these projects and the targets above will be reported in each annual update of this plan.

7. Declaration and sign-off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and the associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard, and use the appropriate UK Government conversion factors for greenhouse gas company reporting. Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions has been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors.
